

Production of Evacuation Plans and Diagrams

Introduction

Under current legislation, it is mandatory to have a working evacuation plan in place to ensure the safety of any people under your control at your site.

Evacuation Plans

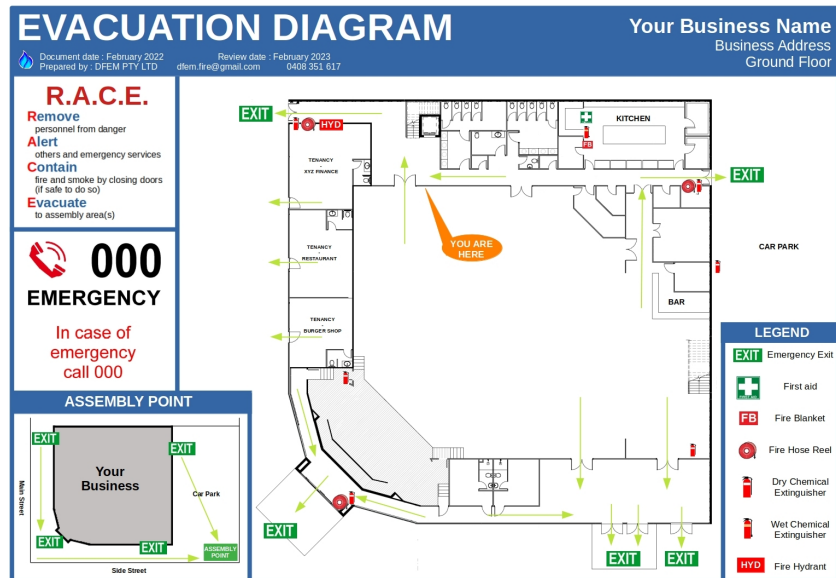

An evacuation plan is a written document developed to ensure your site has considered and planned for all emergencies that might arise.

We can come to your site and work with you to produce an evacuation plan, or update your existing one. You will receive a written document tailored to your site with emergency procedures and participant responsibilities. We also supply an electronic copy so you can update your plan when required.

Evacuation Diagrams

Within any evacuation plan, there must be a valid and compliant evacuation diagram. The diagram is a map of your site that shows occupants where the emergency exits and safety features are located.

Sample Evacuation Diagram :

Multiple copies are required and placed at locations where they can best be viewed and help occupants exit the site in case of an emergency.

Costs

Evacuation Plans : \$500.00 GST exclusive (does not include the diagram)

Evacuation Diagrams : \$300.00 GST exclusive buildings under 500 m2
 \$500.00 GST exclusive buildings between 500 m2 to 1,000m2
 \$800.00 GST exclusive buildings over 1,000 m2

Sites with extremely large buildings or with multiple buildings will require a separate quotation.
